Select indicators

Walkability can be described as a combination of the indicators described below. You can select which indicator to use by checking the boxes below.

Walking path / sidewalks

☒ Elevation

A place is considered more walkable if the elevation is low.

☐ Street connectivity

The more street intersections, the better for walkability.

☒ Slope

A road with a high slope is less walkable. You can define the biggest slope you consider to be walkable (in %):

Maximum uphill slope

Amenities and Attractions

☐ Population density

A higher density means a more walkable area.

☐ Proximity of parks

This indicator is higher when a park is nearby. You can define the maximum distance from which a park is too far (in meters):
